Audi has neutralized these effects by implementing turbocharging and the two-stage Audi valvelift system (AVS). At higher load and engine speed, the AVS of the V6 TFSI closes the intake valves later – the opening time is increased to 180 degrees crank angle in the 3.0 TFSI and to 200 degrees in the 2.9 TFSI.

Change the Gear Box Oil Every 40,000 Miles. There have been reports of early burnout that could have been avoided with regular oil changes. Making sure that you keep up with the regular multitronic gear box oil changes will go a long way to ensure that you have many happy miles ahead of you.

[Are Audi cars reliable? - Quora](#)

The gearbox shafts need to be moving at the same speed in order to change gears smoothly and when this doesn't happen, you'll hear grinding. Modern cars tend to have a synchroniser ring to help keep both parts up to speed, but this can also go wrong from time to time, so it's best to have things checked out.
